

BL5199 – Research Project in Conservation and Nature-based Climate Solutions (12MCs)

This is a project-based module for students taking the M.Sc. in Biodiversity Conservation and Nature-based Climate Solutions. Students will take this module or BL5299 (Internship in Conservation and Nature-based Climate Solutions). In this module, students will conduct research on topics related to conservation science, under the supervision of a faculty member and/or co-supervisors with our industry partners. Through this independent project, students will gain hands-on practical knowledge in solving conservation-science related problems using scientific techniques. The research project is concluded with a written report and an oral presentation.
